Education

Oberlin College — Oberlin, OH
Bachelor of Arts in Computer Science, Minor in Mathematics — *Aug. 2022 – May 2026*

Technical Skills

Languages: Python (Flask, Django, FastAPI, SQLAlchemy), JavaScript/TypeScript (React, Next.js, Node.js, Express), Java, C/C++, SQL, HTML/CSS
Infrastructure: MySQL, PostgreSQL, SQLite, Redis, Git/GitHub, GitHub Actions (CI/CD), Docker, VS Code
Additional: REST APIs, LLM API Integration (Claude, Gemini), Object-Oriented Design, Browser Automation (Playwright)

Professional Experience

Frontend Developer — July 2026 – Present
ALIA Prod — *Remote*

- Audited and refactored client web applications for performance, responsive UI, SEO, and WCAG accessibility standards, translating technical findings into prioritized implementation roadmaps.
- Consolidated and structured venue and presenter data pipelines into clean schema formats, implementing client feedback across multiple iterations to power maintainable frontend assets.
- Cross-referenced complex external datasets against existing application data to eliminate duplicate entries and maintain strict structural integrity for web-facing features.
- Leveraged AI-assisted development and automation tools to streamline technical research, data transformations, and documentation while maintaining strict manual QA on production deliverables.

Engineering Intern — June 2024 – July 2024
JET — *Okayama, Japan*

- Worked in a semiconductor cleanroom supporting batch-type wafer processing equipment, assisting engineers with troubleshooting, inspections, and process checks across cross-functional teams in Japan, California, and India.

Projects

ZeroCatch (Full-Stack) | live demo | repo | *Next.js, TypeScript, Supabase/PostgreSQL, Claude API* — 2026

- Designed and deployed a full-stack deal-aggregation platform with row-level security, an installable PWA frontend, and server-rendered, shareable search and filters.
- Built a hybrid verification pipeline combining Python scrapers with a structured-output Claude API classifier to vet incoming listings, backed by deterministic guardrails, scheduled scraping via GitHub Actions, and rate-limited abuse reporting.

Aboulomania (Full-Stack) | live demo | repo | *FastAPI, SQLAlchemy, Next.js, PostgreSQL, Claude API* — 2026

- Built an AI game-recommendation app that filters and ranks a game catalog with a weighted scoring model and generates a per-result natural-language explanation using the Claude API.
- Integrated the Steam Web API/OpenID for library import and the HowLongToBeat API for playtime data, with Clerk for authentication and Redis/Docker Compose for local development.

AuditMe (Full-Stack) | live demo | repo | *Node.js, Express, React, Playwright, Docker* — Aug. 2026 – Present

- Built a full-stack website-audit tool: a CLI, Node.js/Express API, and React frontend sharing one core engine, using Playwright browser automation and axe-core to check a URL across three categories: functional, SEO/metadata, and WCAG accessibility issues.
- Wrote 36 automated tests (Node test runner, Supertest, Vitest) covering check logic, API routes, and the frontend, run through a GitHub Actions CI/CD pipeline; containerized the app with Docker, deployed it to Render, and fixed a production bug in per-IP rate limiting caused by the reverse proxy's IP.

Extracurricular Activities

Ashby Business Scholar — Winter 2025
Ashby Business Scholars Program — *Oberlin College*

- Selected as 1 of 14 students for an intensive business leadership and professional development program.
